

Process & continuous improvement engineer

We are looking for an enthusiastic, creative, results oriented candidate to fill the position of die casting process & continuous improvement engineer, with main responsibilities in following the production process development and the continuous improvement activity according to the established norms and procedures.

Specific job responsibilities are:

- establishing the optimal location for the production equipment for new projects
- cycle time optimization, elaboration of work instructions
- follow-up of the compliance with customer requirements
- finding solutions for quality improvement and process improvement
- identification of productivity improvement possibilities
- active participation in internal and external audits
- training of the direct productive staff

Mandatory requirements:

- university education in engineering (TCM/ Mechanics/ Automation)
- advanced technical, mechanical, metallurgical, technical drawing and interpretation, over average PC skills
- medium knowledge in programming industrial robots
- advanced English is a must (another language Spanish, German or French is a plus)
- at least 1 year experience on a similar position, in production or process related
- good analytical skills, capable of taking initiative

Are favored candidates with:

- knowledge of HPDC (high pressure die casting) and machining technology
- experience in a serial production environment, especially automotive
- proven experience in process improvement and internal process audit
- training course of ISO/TS 16949 and/or Six Sigma and/or Lean manufacturing

We offer:

- challenging work environment
- basic 3 months training at a production facility from the CIE Automotive Group (www.cieautomotive.com)
- competitive salary package based on professional results
- immediate integration
- other bonuses and benefits, meal tickets
- monthly SPA pass (fitness, massage, swimming pool)
- annual performance bonus
- career plan
